NEW BOOKS

HENDERSON, FRANK YOUNG. TIMBER, ITS PROPERTIES, PESTS AND PRESERVATION. London. C. Lockwood & Sons, Ltd. 1944. 201 p. 38.79 H38

"It is a remarkable fact that of the many engaged in the specification, handling and working of timber, few have even a superficial knowledge of branches of timber technology other than those in which they themselves specialize. This is not perhaps surprising, however, for although there is no lack of literature on the subject, yet it is largely scientific, and the busy man had neither the time nor the desire to master new terminology and to work through the detailed technical methods of other specialists. Since the first edition was written an enormous expansion in the use of timber and its products has taken place, particularly of plywood and its derivatives; and extensive research and development is going on. The fundamental facts and ideas, however, with which this book is primarily concerned are unchanged, and so therefore is much of the text, which has been expanded only where necessary to indicate recent trend of development." Foreword.

The aim of this book is to deal simply but adequately with the different aspects of timber, so that the reader may gain a general grounding enough for everyday purposes and capable of development in one direction or the other if it is so desired

PLASTICS CATALOG. MODERN PLASTICS ENCYCLOPEDIA, 1946. A REFERENCE BOOK. Like any book of reference, the Modern Plastics Encyclopedia is of most value to readers. You will appreciate the volume and variety of plastics information contained in this book.

REMSBURG, C.J.J. van. NEW WORLDS TO WIN. Bloemfontein (South Africa). A.G. White, 1946. 201 p. 56.7 R29.

"You will find the story told in these pages as interesting as any detective thriller or any tale of high adventure. It is a simple story - simply told - of Mother Nature in our own country - of her history, her sufferings in the recent past and of dire consequences likely to follow should she continue to be ill-treated by the wisest - and yet at times, the most ill-behaved and most foolish of all living things: Man.

From point to point as the story unfolds, we are shown what has been happening to our plants, our animals, our soil, our water resources, and, of course, to

our true National wealth: the natural fertility and well-being of our land. But the authors are not content to tell a tale of sad destruction only, they go on to make clear how Mother Nature may be helped to recover much of her pristine beauty, health and wealth. In direct, accurate and yet easy manner we are told how our veld could be utilized and improved, how our water supplies could not only be maintained but could be greatly developed.

It is a saga of healthy soil, vigorous vegetation, fat and contented animals, and of a prosperous, industrious and hard-thinking farming community in our land. Every person will find something of interest, something of value, something new in this book. Read it, ponder its message, and give your own service in your own time and way, toward the solving of one of our country's greatest problems in the coming decade and century." Comments by John Phillips, Professor of Botany, University of the Witwatersrand.

U.S. LAWS, STATUTES, ETC. ... REVISED EDITION OF LAWS APPLICABLE TO THE UNITED STATES DEPARTMENT OF AGRICULTURE, 1945. vol. I & II. Washington, D.C. Government Printing Office, 1945. 1 So45L.
Laws applicable to the department up to and including the 78th congress, re-organization plans, executive orders reflecting the origin and the organization of agencies of the department, and current appropriation provisions.
